Ludlow, MA 01056

GEO-FLOW® PIPE LEACHING SYSTEM RECEIVES APPROVAL FROM MASSACHUSETTS DEP

ADVANCED DRAINAGE APPLICATIONS:

With polypropylene grid, geotextile wrapping, and system sand, the GEO-Flow Pipe Leaching System offers improved effluent treatment and dispersal. Its flexibility makes it an excellent choice for contoured applications. As approved by the Massachusetts DEP, the GEO-Flow Pipe Leaching System is an effective solution for both new and replacement soil absorption system applications.

EASY INSTALLATIONS:

Because the GEO-Flow Pipe Leaching System is gravel-less and has a lightweight design, it is easily delivered and installed in areas where conventional pipe and gravel systems would be difficult to use. It requires fewer people, less time and less heavy equipment to install. It all adds up to lower installation costs. GEO-Flow Pipe Leaching on-site septic systems offer top performance for all of your needs.

SUPERIOR ENGINEERING:

The GEO-Flow Pipe Leaching System is an advanced, gravel-less treatment and dispersal system that is ideal for use in equal distribution applications as required in the Massachusetts rules. Its patented pipe design promotes enhanced biomat development and performance, and when installed in system sand creates a significantly more efficient soil absorption system than conventional pipe and stone.

NEW MASSACHUSETTS DEP APPROVALS:

On July 7, 2008 the Massachusetts DEP issued a "Certification for General Use" and an "Approval for Remedial Use" to ADS/Hancor for use of the GEO-Flow Pipe Leaching System in soil absorption system applications in Massachusetts. These approvals offer solutions to your on-site system design and installation challenges. Check out these approvals at: www.mass.gov/dep/water/wastewater/iatechs.htm
